DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 3, 4, 6 and 7 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Njemanze (US 6,468,219).

Njemanze discloses a transcranial Doppler ultrasound device adapted to be surgically implanted in the body of a patient. Transducer 16 monitors the hemodynamic conditions of the patient. The system can be programmed to automatically access the Internet 14 and use the "File Transfer Procedure" (FTP) to move files containing information that may include spectral data, microembolic signal rate, patient personal data, equipment serial number and lot number to the attending physician or emergency medical service personnel.

Regarding claim 6, the examiner is interpreting a blood flow measurement to comprise a measurement that relates to pulmonary pressure and heart rate.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Njemanze (US 6,468,219).

Njemanze shows all of the claimed features except for measuring blood pressure values or enabling access to various zones including a dedicated public zone, confidential zone and a private zone.

While Njemanze does not specifically mention measuring blood pressure values, one of ordinary skill in the art would have found it obvious to adapt the blood flow monitoring to include blood pressure monitoring because blood pressure is a function of blood flow through a vessel and because blood pressure is a critical factor in monitoring a patient's susceptibility to stroke.

Regarding claim 8, one of ordinary skill in the art would have found it obvious to enable access to various zones including a dedicated public zone, confidential zone and a private zone because Njemanaze teaches restricted Internet access may be accomplished via specified websites that ensure strict compliance with the ethical codes implicated in the patient care services.
